

CS342 Project: Submission Guidelines

The submission for the coursework consists of three deliverables: a Jupyter notebook, a PDF summary report, and a video.

1 Jupyter Notebook

- Marked out of 40 points, with 20 points for code and 20 points for comments.
- The file should be clearly separated into sections, with each section corresponding to each of the four parts A, B, C and D.
- The file should be well commented. At the beginning of each section, give an overview of the task that you will complete in the section and what functions you will use to accomplish this. At the beginning of each function definition, describe the function's purpose and what its inputs and outputs are. Don't repeat code in comments.
- Code should be readable. Have meaningful error messages. 5 marks will be for efficiency and 15 marks will be for correctness. While the emphasis is not on efficiency, you are encouraged to optimize as much as possible.

2 PDF Summary Report

- Marked out of 40 points, with 10 points for Part A, 10 points for Part B, 8 points for Part C, and 12 points for Part D.
- For each part:
 - Explain choices you made in your implementation.
 - Explain the output of your code. We're looking for interpretation, not just a copy-paste of the code output.
 - Answer any questions asked in the task specification.
 - If applicable, describe how you might extend the work you carried out.

3 Video

- Marked out of 20 points. But if we suspect the video reveals a lack of understanding of your own submission, it might also affect the marking of the other components.
- Video should show both your face as well as your screen
- Video should show you scrolling through your Jupyter notebook and through your summary report.
- In the video, narrate the structure of your notebook and your report, and explain your main results in plain English.
